TECHNICAL PRODUCT MANAGER | PLATFORMS, DATA & AI

Technical Product Manager with a background in Software Engineering and Data Science, building digital platforms, automation and AI-driven solutions to solve complex business problems in high-scale environments.

Professional summary

- Technical Product Manager with a background in Software Engineering and Data Science, building digital products that solve complex business problems in high-scale environments.
- Experience leading critical platforms, automation initiatives and data-driven products, connecting technology, operations and business strategy to improve efficiency, reduce risk and drive measurable impact.
- Worked across the full product lifecycle, from discovery and strategy through technical execution, metrics and continuous product evolution.
- Highly analytical professional able to bridge engineering, data and business, collaborating with cross-functional teams to build scalable products.

Professional experience

MOTTU

(MAR/2025 – Present)

○ PRODUCT MANAGER – TICKETS (JAN/2026 – PRESENT)

- Developed and deployed rapid MVPs using Python, n8n, and workflow automation tools, restoring a critical Mexico operation within 3 weeks and unlocking significant recovered revenue.
- Built and operationalized a new revenue stream (NIC product), generating an incremental ~R\$500K–R\$1M/month through optional compliance-based monetization.
- Designed an AI-assisted support automation system integrating GPS, documentation, and operational signals to reduce customer friction and manual intervention costs.
- Owned full product lifecycle (discovery → delivery) in a high-velocity environment, building mission-critical systems from scratch under tight operational constraints.

○ TRAINEE – LOGISTICS & FACTORY OPERATIONS (MAR/2025 – DEC/2025)

- Built expedition and licensing systems from scratch using Python, C#, .NET and automation, delivering a critical operational product in a one-person, high-ambiguity environment.
- Delivered a motorcycle expedition MVP that connected factory, transport and licensing for 100,000 units/year, accelerating operations and reducing reliance on manual workflows.
- Launched a licensing tracking platform that automated operational stages and removed manual follow-up, creating a foundation for future internal product growth.
- Owned full discovery-to-delivery lifecycle in a mission-critical business, mapping end-to-end flows and unlocking visibility into SLAs, costs and logistics risks.

GRUPO FLEURY

(JAN/2024 - DEC/2024)

○ INTERN - DATA SCIENCE (JAN/2024 – DEC/2024)

- Built a B2B commercial-intelligence MVP using Python and SQL to identify sales opportunities through historical consumption analysis and automated lead generation.
- Delivered an end-to-end data solution in an ambiguous environment, from extraction and cleaning to modeling and CRM-ready recommendations for the sales team.
- Collaborated with end users in rapid validation cycles and launched the first campaign, generating approximately R\$2,000,000 annualized revenue.

PETROBRAS / FDTE

(JAN/2020 – JUN/2022)

○ RESEARCH SCHOLAR - PETROBRAS (JAN/2020 – JUN/2022)

- Built two software applications from scratch in Python and Java to solve real reliability engineering problems in a Petrobras R&D project.
- Turned academic research on neural networks and FMEA into practical tools used by researchers and engineers throughout the project.
- Worked with high autonomy, owning the entire process from problem understanding to software development and validation.

Education and certifications

- ✓ Bacharelado em Engenharia de Produção – UNESP – Universidade Estadual Paulista (2019 – 2024)
- Membro Pesquisador do Grupo de Simulação e Modelagem Computacional (CNPq/UNESP) (2021 – 2022)
- Inglês: Nativo
