TECHNICAL PRODUCT MANAGER | PLATFORMS, DATA & AI

Technical Product Manager with a background in Software Engineering and Data Science, building digital platforms, automation and AI-driven solutions to solve complex business problems in high-scale environments.

Professional summary

- Technical Product Manager with a background in Software Engineering and Data Science, working on regulatory and analytics products that reduce operational risk while delivering measurable financial impact.
- Experience leading critical platforms, automation initiatives and data-driven products, connecting technology, operations and business strategy to improve efficiency, reduce risk and drive measurable impact.
- Worked across the full product lifecycle, from discovery and strategy through technical execution, metrics and continuous product evolution.
- Highly analytical professional able to bridge engineering, data and business, collaborating with cross-functional teams to build scalable products.

Professional experience

MOTTU

(MAR/2025 – Present)

○ PRODUCT MANAGER – TICKETS (JAN/2026 – PRESENT)

- Led product strategy for a regulatory compliance platform managing ~R\$10M/month in financial exposure, achieving 99% risk mitigation through end-to-end automation of operational processes.
- Co-designed the evolution from a monolithic system to an event-driven, microservices-based architecture, improving scalability, observability, and reliability of a high-risk operational platform.
- Built and deployed an AI-based document validation pipeline for identity and compliance checks, automating ~99% of processing and reducing manual operational effort by ~90%.
- Managed integration with 600+ government authorities across Brazil, ensuring end-to-end compliance for ~35,000 monthly transactions with high reliability and traceability.

○ TRAINEE – LOGISTICS & FACTORY OPERATIONS (MAR/2025 – DEC/2025)

- Led the internal motorcycle expedition product for 100,000 units/year, building validation flows across planning, fiscal invoicing, and actual execution and raising operational SLA from ~65% to above 90%.
- Managed system architecture for regulatory and logistics workflows, centralizing business rules and integrations with factory, transporters and despachantes to reduce manual dependency and improve traceability.
- Built C#/.NET APIs and PostgreSQL data models to support transport of 80 motorcycles per truck, delivering a scalable platform for complex multi-stage logistics.
- Chose internal system development over spreadsheet controls, converting a high-variability, high-risk operation into a documented, automated workflow for logistics and licensing.

GRUPO FLEURY

(JAN/2024 - DEC/2024)

○ INTERN - DATA SCIENCE (JAN/2024 – DEC/2024)

- Developed an analytical solution for B2B lead generation based on consumption patterns across 5,000+ tests and 4,000+ laboratories, converting commercial data into prioritized opportunities for the sales team.
- Modeled correlations between tests and estimated sales potential using Python, SQL and statistical models, embedding recommendations directly into the CRM used by the commercial team.
- The pilot campaign derived from the model produced approximately R\$2,000,000 in annualized revenue and catalyzed a new commercial-intelligence product line later expanded by the Data team.

PETROBRAS / FDTE

(JAN/2020 – JUN/2022)

○ RESEARCH SCHOLAR - PETROBRAS (JAN/2020 – JUN/2022)

- Developed Python and Java applications supporting offshore equipment reliability analysis, translating engineering methodologies into software solutions for a joint Petrobras, UNESP and USP research project.
- Designed tools for neural-network-based inspection planning and structured FMEA management, supporting research on risk reduction and maintenance optimization.

Education and certifications

- ✓ Bacharelado em Engenharia de Produção – UNESP – Universidade Estadual Paulista (2019 – 2024)
- Membro Pesquisador do Grupo de Simulação e Modelagem Computacional (CNPq/UNESP) (2021 – 2022)
- Inglês: Nativo
