TECHNICAL PRODUCT MANAGER | PLATFORMS, DATA & AI

Technical Product Manager with a background in Software Engineering and Data Science, building digital platforms, automation and AI-driven solutions to solve complex business problems in high-scale environments.

Professional summary

- Technical Product Manager with a background in Software Engineering and Data Science, working on regulatory and analytics products that reduce operational risk while delivering measurable financial impact.
- Experience leading critical platforms, automation initiatives and data-driven products, connecting technology, operations and business strategy to improve efficiency, reduce risk and drive measurable impact.
- Worked across the full product lifecycle, from discovery and strategy through technical execution, metrics and continuous product evolution.
- Highly analytical professional able to bridge engineering, data and business, collaborating with cross-functional teams to build scalable products.

Professional experience

MOTTU

(MAR/2025 – Present)

○ PRODUCT MANAGER – TICKETS (JAN/2026 – PRESENT)

- Owned product and operational performance metrics for a regulatory compliance system, increasing execution success from 94% to 99% and reducing financial leakage by ~R\$500K/month.
- Led the expansion of the traffic fine platform in Mexico, recovering ~4M MXN in previously lost revenue through rapid MVP development and process redesign.
- Took ownership of the traffic fine indication process, redesigning operational execution and KPI tracking to eliminate end-of-week bottlenecks and improve financial predictability.
- Optimized compliance and documentation funnels, increasing digital license adoption from 75% to 90% and reducing invalid/expired documentation to <2%.

○ TRAINEE – LOGISTICS & FACTORY OPERATIONS (MAR/2025 – DEC/2025)

- Owned the expedition and licensing portfolio, automating manual processes and improving motorcycle expedition SLA from ~65% to above 90% in a critical logistics business flow.
- Built the motorcycle licensing platform to centralize regulatory status, payments and workflow stages, reducing rework and increasing operational control with multiple external partners.
- Implemented dashboards and metrics for SLAs, bottlenecks and cost per motorcycle, enabling financial analysis that supported a billing shift with an estimated ~R\$20M annual savings.
- Coordinated factory, planning, branch operations, transporters and despachantes to deliver a scalable solution that improved predictability and execution quality.

GRUPO FLEURY

(JAN/2024 - DEC/2024)

○ INTERN - DATA SCIENCE (JAN/2024 – DEC/2024)

- Built from scratch a commercial-intelligence solution to identify sales opportunities using historical medical-test consumption data.
- Converted statistical analyses into CRM-ready leads, aligning data science with commercial decision-making in partnership with Pricing and Sales to validate hypotheses.
- The solution was validated in production via a campaign that generated ~R\$2,000,000 annualized revenue and enabled further commercial-intelligence initiatives.

PETROBRAS / FDTE

(JAN/2020 – JUN/2022)

○ RESEARCH SCHOLAR - PETROBRAS (JAN/2020 – JUN/2022)

- Developed software applications that digitalized reliability engineering workflows, automating offshore equipment analysis and reducing manual research activities.
- Built a structured FMEA management platform and an inspection planning tool powered by neural-network models.
- Worked directly with researchers and Petrobras specialists to validate requirements, iterate on features and transform research hypotheses into usable software.

Education and certifications

- ✓ Bacharelado em Engenharia de Produção – UNESP – Universidade Estadual Paulista (2019 – 2024)
- Membro Pesquisador do Grupo de Simulação e Modelagem Computacional (CNPq/UNESP) (2021 – 2022)
- Inglês: Nativo
